Informed Consent Document

PATIENT NAME: _____

You are the decision maker for your health care. Part of our role is to provide you with information to assist you in making informed choices. This process is often referred to as "informed consent" and involves your understanding and agreement regarding the care we recommend, the benefits and risks associated with the care, alternatives, and the potential effect on your health if you choose not to receive the care. Please read this entire document prior to signing it. It is important that you understand the information contained in this document. Please ask questions before you sign if there is anything that is unclear.

The nature of the chiropractic adjustment.

The primary treatment used by doctors of chiropractic is spinal manipulative therapy. The doctor will use that procedure to treat you. The doctor may use my hands or a mechanical instrument upon your body in such a way as to move your joints. That may cause an audible "pop" or "click," much as you have experienced when you "crack" your knuckles. You may feel a sense of movement.

The risks inherent in chiropractic adjustment.

It is important that you understand, as with all health care approaches, results are not guaranteed and there is no promise to cure. As with all types of health care interventions, there are certain complications which may arise during chiropractic manipulation and therapy. These complications include but are not limited to: fractures, disc injuries, dislocations, muscle strain, cervical myelopathy, costovertebral strains and separations. Some types of manipulation of the neck have been associated with injuries to the arteries in the neck leading to or contributing to serious complications including stroke. Some patients will feel some stiffness and soreness following the first few days of treatment. The Doctor will make every reasonable effort during the examination to screen for contraindications to care; however, if you have a condition that would otherwise not come to the Doctor's attention it is your responsibility to inform the Doctor.

The availability and nature of other treatment options.

It is also important that you understand there are treatment options available for your condition other than chiropractic procedures. Likely, you have tried many of these approaches already. These options may include, but are not limited to: self-administered care, over-the-counter pain relievers, physical measure and rest, medical care with prescription drugs, physical therapy, bracing, injections, and surgery. Lastly, you have the right to a second opinion and to secure other opinions about your circumstances and health care as you see fit.

The risks and dangers attendant to remaining untreated.

Remaining untreated may allow the formation of adhesions and reduce mobility which may set up a pain reaction further reducing mobility. Over time this process may complicate treatment making it more difficult and less effective the longer it is postponed.
